DETAILED ACTION

This office action is in response to Paper No: 7, amendment B, received 6/12/03.

Claims 9-10 were withdrawn. Applicant's election of claims 1-8 in Paper No. 7 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). The election of species for Z and Y to be nitrogen, and for R1-R4 to be electron withdrawing groups, is acknowledged.

Claims 1-8 are pending.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 1-8 are drawn to a method for selectively enriching/removing a serum albumin from a mixture of other compounds by contacting said mixture with a ligand (=X). The said ligand having affinity for and enabling binding of the serum albumin. The instant specification recites 14 ligand structures, see pages

Art Unit: 1654

13-14. The instant specification recites 3 test proteins, see page 14, lines 2-4. As best understood, The results of the binding recite that based on conventional ways of interpreting the chromatogram recorded, none of the ligand structures showed binding to IgG or HSA (see page 16, lines 2-4). Further, the instant specification recites that all chromatograms for IgG looked the same and the position of the eluted IgG suggested no interaction/binding (see page 16, lines 9-11). Accordingly, based upon the apparent (and confusing) results set forth, e.g., on pages 15-16 of the instant specification with respect to the non-binding of albumin to the disclosed/ claimed ligand structures, the claimed invention is not deemed enabled.

Conclusion

-----All claims are rejected.-----
